

CYLINDER VALVES

V200, V400, V800 Series, Accessories

PROFILE

GENTEC® Company Overview

Solutions for Life

About Us

GENTEC is a global leader in the design, engineering, and manufacturing of critical gas delivery systems and components for the semiconductor industry. Products include ultra-high purity gas regulators, pressure gauges, valves, fittings and substrates. With over 50 years of manufacturing experience, GENTEC remains committed to delivering top-notch quality, ensuring the seamless realization of next generational systems.

Our Team

Our highly educated team of engineers, salespeople, technicians, managers, and customer service personnel are dedicated to providing you with products with the highest quality, reliability and performance. We hold the highest standards to our manufacturing processes; our total process management maximizes our production efficiency while ensuring product quality.

We work closely with all of our customers to design products specific to your needs. This includes developing new products, redesigning existing products, and customizing configuration / packaging. It is our priority to foster a strong relationship with each and every customer.

Quality Assurance

All of our products are manufactured under stringent quality control. We are ISO 9001: 2001 and API certified. Our products meet UL, CE, SEMI, and various international standards and certifications.

Manufacturing Capabilities

Products are manufactured in a 50,000 square meter facility boasting state-of-the-art CNC centers and fully automated robotic arms. To ensure cleanliness, we utilize an 18.25 MΩ deionized ultra-pure water system and a 29-tank automatic ultrasonic cleaning system. Additionally, a 99.99999% ultra-pure nitrogen plant and orbital welding are used in the manufacturing and assembly process. Our electropolishing and surface treatment facility can achieve Zero Emission and significantly minimize our environmental footprint, showcasing our commitment to a sustainable environment.

Cleanroom Facilities

Our Class 100 (ISO 5) cleanrooms are designed for ultra-high purity (UHP) product manufacturing. UHP products undergo precision machining, wetted surface treatment, electropolishing, and passivation. All UHP products are cleaned using 18 MΩ deionized (DI) water in a cascade ultrasonic tank. To ensure optimal UHP product quality, they are subsequently vacuum-dried and double-bagged.

TECHNOLOGY OVERVIEW

Cylinder Valves

Solutions for Life

V200 SERIES

Gas Type: High purity, flammable & toxic gases

Applications: Calibration, Laboratories, food industry

Purity grade: >5.0

Advantages:

- The gas does not come into contact with the valve operating mechanism.
- High leak tightness through diaphragm sealing.
- Low operating torque.

V400 SERIES

Gas Type: High, Ultra High purity, toxic & corrosive gases

Applications: Electronics manufacturing, Chemical industry

Purity grade: >8.0

Advantages:

- Reduced dead space and wetted volume allow for quick and easy purging.
- Springless, threadless design minimizes particles and prevents gas contamination.
- Robust mechanical linkage between lower and upper stems and handwheel. ensures smooth and reliable operation.
- Tied diaphragm design ensures superior leak-tight integrity, prevents particle generation, enhances durability, and provides consistent performance.

V800 SERIES

Gas Type: High, Ultra High purity, toxic & corrosive gases

Applications: Electronics manufacturing, Chemical industry

Purity grade: >8.0

Advantages:

- The outlet port is sealed and protected by a cap retained by a chain.
- Mechanically supported and retained valve seat to minimise deformation under load and seat lift under reverse flow conditions.
- The diaphragm separates the operating mechanism from the process fluids, featuring a one-piece, non-welded construction that enhances integrity and extends fatigue life.
- To prevent the shedding of particulate contamination, there are no sliding, rotating or rubbing components in the flow path.
- Springless and threadless design reduces particle generation and prevents gas contamination.
- For transportation the actuator can be locked closed to prevent shock induced leakage.
- The valve mechanism incorporates secondary sealing for enhanced safety.
- Non-tied diaphragm design; the diaphragm directly engages the seat to close the valve, minimizing dead space and wetted surfaces.
- Threaded external leak detection port for convenient connection and enhanced safety.

V200 SERIES

Cylinder Valves

Solutions for Life

GENTEC® V200 Series Cylinder Valves, Suitable for HP, flammable and toxic gases.

Features

- The valve body adopts an integrated structure to prevent leakage.
- The standard form of the valve is a right-angle type, which is directly installed on the gas cylinder.
- Plum blossom-shaped handwheel type rotary switch.

Specification

- Maximum operating pressure: 3000 psi (207 bar)
- Outboard (gland) Leak Rate: $\leq 1 \times 10^{-9}$ mbar l/s (249 bar He)
- Inlet/Outlet (seat) Leak Rate: $\leq 1 \times 10^{-8}$ mbar l/s (249 bar He)
- Operating temperature: $-20^{\circ}\text{C} \sim 70^{\circ}\text{C}$ ($-4^{\circ}\text{F} \sim 158^{\circ}\text{F}$)
- CV: 0.3

GENTEC® V400 Series Cylinder Valves are developed for the semiconductor industry. It is designed for use with ultra-high purity gas cylinders to prevent gas leakage and achieve the low leakage rates demanded by ultra-high purity gas users.

SL-V402-N4-D632-K

Features

- Suitable for most specialty gases including variants for oxygen and highly corrosive gases such as chlorine and hydrogen chloride
- Manual and pneumatic versions are available based on a common body design
- Final assembly and testing are carried out under Class 100 (ISO 5) cleanroom conditions
- 100% high-pressure helium leak test
- Tied-diaphragm design with replaceable valve seat
- Various inlet and outlet gas connection standards are available (CGA, JIS, ISO etc.)
- For transportation the actuator can be locked to prevent shock-induced leakage
- The outlet port is sealed and protected by a cap retained by a chain
- Internally springless design
- The valve mechanism incorporates secondary sealing for enhanced safety

Materials

- Body: 316L, 316L VAR
- Seat: Vespel®, PCTFE
- Diaphragm: Co-Ni Super Alloy

Specifications

- Flow Capacity: Cv=0.3
- Working Pressure: 3000 psi
- Nominal Bore: 4 mm
- Outboard (gland) Leak Rate: $\leq 1 \times 10^{-9}$ mbar l/s (249 bar He)
- Inlet/Outlet (seat) Leak Rate: $\leq 1 \times 10^{-8}$ mbar l/s (249 bar He)
- Temperature: -40°C ~ 60°C (-40°F ~ 140°F)

Pneumatic Control Specification

- A normally-closed actuator is available for all valves
The valve is opened by applying pressure and is closed by spring return
- Pilot Pressure: 73 ~ 116 psi
- Actuating Medium: Air or Nitrogen
- Pilot Port: G 1/8
- Materials of Construction: stainless steel, nickel aluminium bronze and hard anodized aluminium alloy

SL-V401-N4-D632-K

V800 SERIES

Cylinder Valves

Solutions for Life

GENTEC® V800 Series Cylinder Valves are developed for the semiconductor industry. It is designed for use with ultra-high purity gas cylinders to prevent gas leakage and achieve the low leakage rates demanded by ultra-high purity gas users.

SL-V801-N4-D632-K

Features

- Suitable for most special gases including variants for oxygen and highly corrosive gases such as chlorine and hydrogen chloride
- Manual and pneumatic versions are available based on a common body design
- Final assembly and testing are carried out under Class 100 (ISO 5) cleanroom conditions
- 100% high-pressure helium leak test
- Low internal dead volume minimizes purge time
- To prevent the shedding of particulate contamination, there are no sliding, rotating, or rubbing components in the flow path
- Various inlet and outlet gas connection standards are available (CGA, JIS, ISO etc.)
- For transportation the actuator can be locked to prevent shock-induced leakage
- The outlet port is sealed and protected by a cap retained by a chain
- Internally springless design
- The valve mechanism incorporates secondary sealing for enhanced safety

Materials

- Body: 316L, 316L VAR
- Seat: VespeI®, PCTFE
- Diaphragm: Co-Ni Super Alloy

Specifications

- Flow Capacity: Cv=0.26
- Working Pressure: 3335 psi
- Nominal Bore: 4 mm
- Outboard (gland) Leak Rate: $\leq 1 \times 10^{-9}$ mbar l/s (276 bar He)
- Inlet/Outlet (seat) Leak Rate: $\leq 1 \times 10^{-8}$ mbar l/s (276 bar He)
- Temperature: -40°C ~ 60°C (-40°F ~ 140°F)

Pneumatic Control Specification

- A normally-closed actuator is available for all valves
- The valve is opened by applying pressure and is closed by spring return
- Pilot Pressure: 73 ~ 116 psi
- Actuating Medium: Air or Nitrogen
- Pilot Port: G1/8
- Materials of Construction: stainless steel, nickel aluminium bronze and hard anodized aluminium alloy
